Q1 2015 - Management Discussion and Analysis

The first quarter of 2015 saw a continuation of good market demand in Poland and in Europe. In spite of the decrease in Poland by 4%, the production of crude steel increased in 28 European Union countries (EU[28]) by 1% as compared to Q1 2014. The world's output rose by 3% in the same period fuelled by the 4% growth in China. While the steel market dynamics had a clear positive impact on our shipments and revenues we are not content with how our profitability has been developing over the past few quarters. In our opinion this results from the very low prices of iron ore and coking coal which in turn have given a significant cost advantage to the blast oxygen furnace (BOF) producers. The BOF producers are now able to offer cheaper products which leads to the decrease of prices and margin compression for the electric arc furnace (EAF) produces as the prices of scrap metal fell down to much lesser extent in comparison with the BOF feedstock components.

The current development of the market had its influence on our latest performance. Cognor S.A. (Cognor, the Company, the Group) managed to increase revenues as compared to Q1 2014 and also Q4 2014 despite the falling prices. Our profitability however was much weaker comparing with both of the quarters and only the net result proved stronger yet this was possible primarily due to the exchange rates gain related to our indebtedness.

I. Reported Statement

1. Income Statement

The Group's revenues increased by PLN 19.4 million and 5.5% primarily due to the 11.9% increase in shipments of combined ferrous scrap metal, steel semi-finished and finished products. Gross profit fell by PLN 9.5 million and 22.9% as compared to Q1 2014, driven primarily by: (i) the compression of spreads and (ii) the decrease of prices of semi-finished and finished products. The temporary loss originating from the decrease of prices in Q1 2015 resulted from the FIFO method applied in our accounts where the costs of sales are determined by the earliest manufactured products. As our current inventory turnover is around 73 days one may assume that the costs of sales in Q1 2015 were mostly accrued in Q4 2014 when our production costs and appropriately our sales prices, were significantly higher. Thus, we estimate that the negative spread development brought the loss of PLN (-) 11.1 million and the decrease of prices the further PLN (-) 8.3 million.

EBIT decreased by PLN 16.5 million and EBITDA by PLN 16.0 million. EBITDA margin decreased from 9.3% down to 4.5%. The FX development had negligible effect on our operations with the average EUR/PLN practically unchanged as compared to Q1 2014. A significant impact it had on our net financial costs - the net FX gain related to the Company's indebtedness stood at PLN 18.0 million driven primarily by the strengthening zloty against the euro: EUR/PLN quoted at PLN 4.26 as of December 31, 2014 and at PLN 4.06 as of March 31, 2015.

2. Balance Sheet

The amount of non-current assets decreased primarily due to the reduction in the value of other receivables resulting from the decision to provision the whole amount of the claim owed by the Republic of Croatia at the amount of EUR 10.0 million. This was offset by the increase of current assets fuelled by the higher value of inventories and receivables. The increased level of inventories was caused by higher production of finished products and our trade receivables rose as a result of higher revenues. The amount of total assets saw an increase of just 0.6% as compared to Q1 2014.

In Q1 2015 the Group had the gross debt amounting to PLN 492.9 million and the net indebtedness at 472.7 million - more by PLN 5.1 million as compared to the yearend 2014 and by PLN 17.0 million in comparison to Q1 2014. The main reason behind was the increase of current assets and the related increase of working capital by PLN 19.5 million.

3. Cash flow

The Group had a negative operating cash flow in Q1 2015 due to relatively weak profitability and the increase of working capital by PLN 19.5 million. Cash from investing activities was negative as a result of acquisition of property and equipment. Financing

activities contributed negatively with the payments of interest and transaction costs being only partially offset by the proceeds from factoring and other loans.

II. Main Metrics

Liquidity metrics deteriorated slightly yet they remain at very solid levels. Receivable collection saw an increase and inventory turnover went significantly down. Margins decreased in line with lower profitability. Weak EBITDA and the slight increase of net debt resulted in the increase of leverage up to 5.6 times multiple.
